Expedient routes to highly functionalized quinoline-2-amines. Quinolines have been aminated to prepare two-substituted nitrogen-containing quinolines on gram scale, the first example of palladium(0)-mediated amination on the quinoline N-C bond of 2-methyl quinoline-3-amine. The amination proceeds with complete regio- and diastereoselectivity and without a directing group, under mild conditions involving a Brønsted base. 1. Field of the Invention The present invention is generally directed to the use of non-invasive cooling to treat patients suffering from hyperthermia and/or hypothermia. More particularly, the present invention is directed to the administration of a mixture of buffered saline solution and water to a patient in thermal distress in order to cool the patient's skin and increase the patient's comfort level during transportation. 2. Discussion of the Related Art There are many instances where it is desirable to cool a patient who is suffering from a fever or who is suffering from excess body heat. Generally, patients suffering from these conditions are administered a cooling fluid for the purpose of lowering
