You may be familiar with the idea of using a screen capture to fix a photo. But you may not know how you can actually do this. As for me, I was a user of that software, not the person who decided to update the program. But the fact is that the update enhances the user experience. Sometimes, you may want to remember a particular image for special use, but you may not be able to because you can't locate which file it is. You may look back through your Photoshop collection to find out where the image may have been stored, but it could have been lost to time. Adobe Photoshop saves your settings, so you can decide to always store a certain image in a particular location. This is the best way to find it. But what if you don't want to rely on the program to do so? Google has a feature that can help you find the picture no matter where you store it. But this is the easy way, not the efficient one. A recent update of the Adobe Photoshop product makes it an interactive program. In fact, this is a great way to get back the photo you are looking for. You may be having your photo displayed 24/7 in a prominent place. Already, an image may have come your way, and you may have noticed it, but nothing has been done with it. But that doesn't mean that you can't use Photoshop to help you. You can. In this release, our most important additions are Creative Cloud Services for the iPad, including:

- App Store: Create and run Photoshop CC on your iPad and choose from a selection of apps to extend your creative work while you work.
- Photoshop CC for Enterprise: Work more efficiently with direct access to Photoshop libraries, organize and share your image assets, and manage and secure your work using industry leading protection and management features.
